

The Parks and Recreation staff would like to commend all of the volunteer members of the Study Group who put so much time and effort into this process and express its appreciation to past and present members of the Board of Supervisors, Township staff and professionals for their support of this project and all of their efforts to help us bring this longstanding dream closer to reality.

NATC Master Site Park Plan – Preliminary Conceptual Plan

Hot off the drafting board, the sixth and, hopefully, final conceptual drawing has been included in this directory in hopes that more residents will review it and offer comment. The Master Site Plan Study Group has been working many months to develop this plan that tries to meet with needs of the entire community. Although 243 acres is a very large parcel, it was still difficult to meet the needs of every recreation provider that requested space. Key points of this plan, and it's development over the next 20 years, include preserving portions of open space and protecting environmentally sensitive areas, addressing storm water issues, use of infrastructure already in place, creating sport courts and fields to meet the needs of our growing sport groups, and still providing many areas for self-directed and family passive recreation. This plan is available for "full-size" viewing at the WREC.
